Alex Morgan

FICTIONAL CANDIDATE - LOCAL TESTING ONLY

Seattle, WA | alex.morgan@example.com | +1 202 555 0142

Profile

Early-career software engineer completing an MS in Computer Science, focused on retrieval, applied language models and reliable agent workflows. Strongest in Python, backend prototyping and evaluation; seeking an entry-level industry role rather than a research scientist position.

Education

Cascadia Institute of Technology (fictional)
Master of Science in Computer Science | 2025-09 - 2027-06 (expected)

Pacific Coast University (fictional)
Bachelor of Science in Computer Science | 2021-09 - 2025-06 (completed)

Experience

Software Engineering Intern | Example Labs (fictional)
2026-06 - 2026-08 | Full-time internship
Built a Python document-search prototype for a synthetic support corpus with a team mentor. Implemented ingestion, hybrid retrieval and citation checks; owned evaluation scripts and error analysis, not production deployment.

Created 180 synthetic retrieval questions; Recall@5 increased from 0.64 to 0.79 on a 60-question development split. Fictional fixture metrics; no production or held-out claim.

Graduate Research Assistant | Cascadia Institute of Technology (fictional)
2026-01 - 2026-05 | Part-time, 10 hours per week
Compared sparse and dense retrieval on a synthetic document collection. Maintained reproducible experiment configurations and categorized citation failures.

Projects

Study Search | 2026-09 - present
Built a retrieval assistant with source citations and deterministic regression checks for synthetic course notes. Owns ingestion, evaluation and the local review interface.

Agent Task Bench | 2026-02 - 2026-05
Built a small tool-using assistant with explicit approval gates and replayable synthetic tasks. Worked in a three-person team; owns tool validation and failure analysis.

Skills and availability

Python, TypeScript, SQL, Git, pytest, FastAPI, Information retrieval, Retrieval evaluation, Basic PyTorch, Basic Docker.

Full-time availability: July 1, 2027. Relocation preference and compensation target are undecided.
