Fictional candidate - local course demonstration only

SUMMARY

Early-career software engineer completing an MS in Computer Science, focused on retrieval, applied language models and reliable agent workflows. Strongest in Python, backend prototyping and evaluation; seeking an entry-level industry role rather than a research scientist position.

EDUCATION

Cascadia Institute of Technology (fictional) | Master of Science, Computer Science | 2025-09 - 2027-06

Pacific Coast University (fictional) | Bachelor of Science, Computer Science | 2021-09 - 2025-06

EXPERIENCE

Software Engineering Intern | Example Labs (fictional) | 2026-06 - 2026-08

Built a Python document-search prototype for a synthetic support corpus with a team mentor. Implemented ingestion, hybrid retrieval and citation checks; owned evaluation scripts and error analysis, not production deployment.

- Curated 180 synthetic retrieval questions with reference documents.

- Improved Recall@5 from 0.64 to 0.79 on a fixed 60-question development split; no held-out performance claim.

Graduate Research Assistant | Cascadia Institute of Technology (fictional) | 2026-01 - 2026-05

Compared sparse and dense retrieval on a synthetic document collection. Maintained reproducible experiment configurations and categorized citation failures.

- Presented an internal lab report; no peer-reviewed publication.

PROJECTS

Study Search - Built a retrieval assistant with source citations and deterministic regression checks for synthetic course notes.

Owns ingestion, evaluation and the local review interface.

Agent Task Bench - Built a small tool-using assistant with explicit approval gates and replayable synthetic tasks.

Worked in a three-person team; owns tool validation and failure analysis.

SKILLS

Python, TypeScript, SQL, Git, pytest, FastAPI, Information retrieval, Retrieval evaluation, Basic PyTorch, Basic Docker
